

Uma Tracker — Unified Design & Development Documentation

****System:**** Uma Musume: Pretty Derby Career Tracker / Planner

****Audience:**** Fans and planners seeking to log, optimize, and export Uma Musume character runs with a modern, game-inspired UX.

1. 🎯 Purpose & Audience

- ****Primary Users:**** Uma Musume: Pretty Derby players who want to:
 - Log turn-by-turn stat development for their characters.
 - Plan and track SP (Skill Point) usage and skill acquisition.
 - Export and analyze career data (Excel, TXT, etc.).
 - Enjoy a responsive, visually authentic interface across devices.

2. ✨ Visual Identity & UI Inspirations

- ****Game-inspired Elements:****
 - Stat bars styled with icons and game color codes (see below).
 - Character-centric cards with avatars, aptitudes, and growth rates.
 - Tabbed/pill navigation and card-based layouts.
- ****Typography:**** "M PLUS Rounded 1c" (Google Fonts), fallback: "Figtree", "Inter".
- ****Color Palette:****

Stat	Symbol	Color	HEX	Tailwind
Speed	⚡	Blue	#3399ff	blue-500
Stamina	🛡️	Green	#33cc99	green-500
Power	🔥	Red	#ff3333	red-500
Guts	💪	Orange	#ff9900	orange-500
Wit	🧠	Purple	#9933ff	purple-500
- ****Component Animations:**** Subtle transitions on hover, modal pop, bar fills.
- ****Accessibility:**** WCAG AA contrast, ARIA roles, large touch targets, keyboard navigability.

3. 🛠️ High-Level Architecture

Tech Stack

****Backend:**** Laravel 11+ (PHP 8.2+, MySQL/MariaDB)

****Frontend:**** Blade Components, Tailwind CSS, Alpine.js, Laravel Livewire (optional)

****Extensions:**** Laravel Excel, Laravel Sanctum (API), Chart.js (for stats visualization)

4. 🧩 Data Model Overview

Entity	Core Fields
UmaMusume	id, name, image_url, aptitude_style, aptitude_distance, aptitude_track, growth_speed, etc.
CareerRun	id, uma_musume_id (FK), year, status, uma_class, current_turn, current_race, total_sp_available, stamina_percentage
StatProgress	id, career_run_id (FK), speed, stamina, power, guts, wit, turn_number
Skill	id, name, description, type, sp_cost, best_for
SkillCareerRun	id, career_run_id, skill_id, status (Acquired/Skipped/Suggested), turn_acquired

5. 🏠 Screen & Component Structure

5.1 Dashboard

- ****Header:**** Welcome, Trainer ID, gamified stats (e.g., active plans)
- ****Quick Action Cards:**** 📝 New Plan, 📋 View Plans, 📤 Export
- ****Grid:**** Mobile-first (1 col), desktop (2-3 cols)
- ****Branding:**** Vibrant game hues, soft shadows, large icons

5.2 Uma List / Plan List

- ****Title:**** 🏠 Uma Musume List
- ****Cards:**** Character image, style/track badges, link to career/planner
- ****Actions:**** "Preview", "Export", "Edit", "Delete" (icon buttons)
- ****Layout:**** Responsive grid (1–3 cols), hover transitions

5.3 Career/Plan Form

- ****Header:**** Uma avatar/name, "Turn X/Y" badge, stamina bar (gauge)
- ****Stats Grid:**** Inline progress bars/circles (x/1200), stat icons
- ****Aptitudes:**** Dropdowns for grades (A–G) for Turf/Dirt/etc.
- ****Growth/Condition:**** Inline, icon-labeled text
- ****Skills Section:**** Dynamic rows (add/remove), autocomplete, colored left border by skill type
- ****Interactivity:**** Alpine.js for skill rows, inline validation, floating "+ Add Skill" button
- ****Footer:**** Fixed "Save/Submit" bar on mobile

5.4 Export/Preview Modal

- ****Styled Export:**** TXT/Excel with themed headers, stat bars, skill cards as in-game preview

- **Modal:** Rounded, animated, ARIA-labeled

6. 🧩 Component Blueprints

Component	Purpose & Example
<code>`x-stat-bar`</code>	Horizontal stat bar, icon prefix, animated fill. `<x-stat-bar stat="Speed" value="850" max="1200" />`
<code>`x-skill-card`</code>	Skill row: name, SP, acquired toggle, notes. Colored border by skill type.
<code>`x-plan-card`</code>	Plan summary: title, stat mini-bars, badges.
<code>`x-aptitude-badge`</code>	Grade badge (A–G) for suitability.
<code>`x-responsive-grid`</code>	Adaptive container for cards/forms.
<code>`x-modal-preview`</code>	Export/preview modal with fade-in and scroll support.
<code>`x-progress-gauge`</code>	Circular/radial stat indicator (optional for visualizations).

Example: Stat Bar (Blade + Tailwind)

```
```html
<div class="relative w-full h-4 bg-gray-200 rounded-full overflow-hidden">
 <div class="h-full transition-all duration-300" style="width: {{ $percent }}%; background-color:
var(--stat-color);"></div>
</div>
<p class="text-sm mt-1 font-semibold text-gray-600">⚡ Speed: {{ $value }}/1200</p>
```
```

Example: Skill Card

```
```html
<div class="bg-white shadow-md border-l-4 border-blue-500 rounded-lg p-3 flex items-center
space-x-3">
 Hydrate
 20 SP
 <input type="checkbox" class="form-checkbox">
 <input type="text" class="flex-1 border-none" placeholder="Notes">
</div>
```
```

7. Development Approach

7.1 Planning & Wireframing

- ****Figma:**** Wireframes for all major screens (Dashboard, Plan List, Career Form, Export Modal)
- ****Component Library:**** Define all atomic and composite components before page assembly

7.2 Implementation Steps

****1. Project Setup****

- Initialize Laravel 11+ project
- Install Tailwind CSS, Alpine.js
- Set up Blade component folders for `x-stat-bar`, `x-skill-card`, etc.
- Add "M PLUS Rounded 1c" via `` in Blade layouts

****2. Data Models & Migrations****

- Define Eloquent models and relationships per schema above
- Create migrations for UmaMusume, CareerRun, StatProgress, Skill, SkillCareerRun
- Seeders for basic skills and demo characters

****3. Core Pages & Routing****

- Route::resource for UmaMusume and CareerRun
- Dedicated controllers for Plan, Export, and API endpoints

****4. Blade Views & Components****

- Use `@component` and `@slot` for all UI pieces
- Implement Alpine.js for dynamic skill row addition/removal
- Inline validation and error messages

****5. Export & Data Tools****

- Integrate Laravel Excel for `.xlsx` exports
- TXT export: Themed, markdown-like output preview in modal
- Skill search/autocomplete: Alpine.js frontend, backend API

****6. Responsive & Accessibility****

- Mobile-first grid layouts
- All form controls $\geq 44\text{px}$
- ARIA-labels, tab indexes for all interactive elements
- Color contrast tested with Lighthouse / axe

****7. Visual Enhancements & Theming****

- Custom CSS variables: `--stat-color`, `--card-bg`, etc. for dark/light modes
- Game-style icons for stats (SVG or emoji)

- Hover/active transitions on buttons, cards, tab switches
- Fixed sticky footer for primary actions on mobile

7.3 Data Visualization

- Chart.js for stat progression over turns (line chart in Plan Details)
- Themed charts with pastel lines, drop shadows

8. 🛠 Accessibility & UX

- All stat bars and color codes have matching text/labels
- Inline error messages for forms
- Keyboard-friendly: all dynamic components support tab navigation
- ARIA-roles for custom components (modals, tabs, dynamic rows)
- Responsive touch targets and sticky footers for mobile usability

9. 🛠 Example User Flow

1. ****Register Character:**** Enter Uma's name, image, aptitudes, growth rates.
2. ****Start Career:**** Begin a CareerRun, select year, class, initial stats.
3. ****Log Turns:**** Update stats, stamina, skills acquired each turn; skill rows are dynamic.
4. ****Export:**** At any time, preview or export plan as TXT or Excel.
5. ****Review/Replay:**** Visualize stat progress and skill acquisition timeline.

10. 🌟 Roadmap & Future Enhancements

| Feature | Benefit | Status |
|------------------------|-------------------------------|----------|
| ----- | ----- | ----- |
| Radial stat charts | Quick visual insight per run | Planned |
| Turn history timeline | Replay career progression | Planned |
| AI skill suggestions | Optimized training & SP usage | Planned |
| Themed audio cues | Game-like feedback on actions | Optional |
| Multi-language support | JP/EN/Other | Planned |
| Animated transitions | Enhanced feedback and polish | Ongoing |

11. 📝 Example: Mobile Turn Logging Layout

...

← Uma Tracker

[Turn 12/70]

Stamina ▶■■■■■□□□□□ (60%)

Stats:

Speed 850/1200 ●●●●●○○○○○

Stamina ...

...

Growth Rate: +10% Speed

Conditions: Light Rain + Boost

Skills [+ Add Skill]

Skill Card 1: Hydrate | 20 SP [✓]

Notes: Mid-race recovery

Skill Card 2 ...

Total SP: 340

[Submit Career Run]

...

12. 🛠️ Setup Instructions (Laravel 11+)

```
```bash
Clone and install
git clone https://github.com/extremerazr/uma-tracker.git
cd uma-tracker
composer install
npm install && npm run build

Configure environment and database
cp .env.example .env
php artisan key:generate
Edit .env with DB config
php artisan migrate --seed

Launch
```

php artisan serve  
...

# Uma Musume Career Tracker System Documentation

Laravel 11+ Compatible

---

## Overview

**Uma Tracker** is a Laravel-based platform designed to **track, manage, and analyze** the career progression of Uma Musume: Pretty Derby characters. Built with a modern tech stack, it supports **turn-by-turn stat logging**, **dynamic skill management**, and **career analytics** with a smooth, responsive interface.

## Features

-  Track multiple Uma Musume characters and their career runs
-  Log detailed stats per turn (Speed, Stamina, Power, Guts, Wit)
-  Track skill acquisition with SP costs, types, and notes
-  Log growth rate bonuses and suitability ratings (Track, Distance, Style)
-  Annotate runs with notes and special conditions
-  Export full run logs to Excel (.xlsx)
-  Responsive UI powered by TailwindCSS + Alpine.js
-  Add dynamic skill rows in real-time
-  Supports Dark Mode via class-based toggling
-  Blade Component System: skill cards, stamina bars, stat grids, aptitude inputs, growth rate inputs, initial career run form, animated transitions, add/remove skill buttons

## Technologies Used

- **Laravel 11+**
- **PHP 8.2+**
- **MySQL / MariaDB**
- **Blade + TailwindCSS**
- **Alpine.js** (for dynamic forms)
- **Laravel Eloquent ORM**
- **Laravel Excel** (Maatwebsite)
- **Laravel Sanctum** (optional API authentication)

## Data Models

### ♦ UmaMusume

Field	Type	Description
id	int, PK	Unique identifier for the Uma Musume character.
name	string	The character's name.
image_url	string	URL to the character's image. (Added based on form)
aptitude_style	json	Array of running style suitabilities (e.g., ['Front', 'Pace']).
aptitude_distance	json	Array of distance suitabilities (e.g., ['Short', 'Mile']).
aptitude_track	json	Array of track suitabilities (e.g., ['Turf', 'Dirt']).
growth_speed	int	Bonus percentage for Speed growth (e.g., 20).
growth_stamina	int	Bonus percentage for Stamina growth.

### ◆ CareerRun

Field	Type	Description
id	int, PK	Unique identifier for the career run.
uma_musume_id	int, FK	Foreign key linking to the UmaMusume character.
year	enum	Current career year (e.g., Junior, Classic, Senior).
status	enum	Current status of the run (Ongoing, Finished, Failed).
uma_class	enum	Uma's current class (e.g., Debut to Legend). (Updated from 'class' for clarity)
current_turn	int	The current turn number in the career.
current_race	string	Name of the current race (if applicable).
total_sp_available	int	Total SP available for skill acquisition.
stamina_percentage	int	Current stamina percentage.

### ◆ StatProgress

Field	Type	Description
id	int, PK	Unique identifier for the stat progress entry.
career_run_id	int, FK	Foreign key linking to the CareerRun.
speed	int	Speed stat value for the turn.
stamina	int	Stamina stat value for the turn.
power	int	Power stat value for the turn.
guts	int	Guts stat value for the turn.
wit	int	Wit stat value for the turn.
turn_number	int	The specific turn this stat entry corresponds to. (Updated from 'date' for clarity)

◆ **Skill**

Field	Type	Description
id	int, PK	Unique identifier for the skill.
name	string	The name of the skill.
description	text	Full description of the skill's effect.
type	enum	Category of the skill (e.g., Speed, Accel, Recovery, Debuff).
sp_cost	int	The SP (Skill Point) cost to acquire the skill. (Updated from 'cost')
best_for	string	Recommended usage strategy for the skill.

◆ **SkillCareerRun**

Field	Type	Description
id	int, PK	Unique identifier for the association.
career_run_id	int, FK	Foreign key referencing the CareerRun.
skill_id	int, FK	Foreign key referencing the Skill.
status	enum	Status of the skill within the run (Acquired, Skipped, Suggested).
turn_acquired	int	The turn number when the skill was logged/acquired. (Updated from 'date_logged')

## User Flow Example

1.  **Character Registration:** User creates a new **UmaMusume** record, defining basic info, aptitudes, and growth rates.
2.  **Career Initiation:** A **CareerRun** is started for the newly registered (or an existing) Uma Musume.
3.  **Turn-by-Turn Logging:** Each turn, the user logs current stats (**StatProgress**) and manages skill acquisition/usage.
4.  **Skill Actions:** Skills are marked as **Acquired**, **Skipped**, or **Suggested** within the **SkillCareerRun** context.
5.  **Run Conclusion:** The **CareerRun** is eventually marked as **Finished** or **Failed**.
6.  **Data Archival:** The complete run log can be exported to Excel for personal records or meta-analysis.

## Optional API Routes

Method	Endpoint	Description
GET	<code>/api/uma</code>	Retrieve a list of all Uma Musume characters.
GET	<code>/api/uma/{id}</code>	View detailed profile of a single Uma Musume.
POST	<code>/api/uma</code>	Register a new Uma Musume.
PUT	<code>/api/uma/{id}</code>	Update an existing Uma Musume's profile.
POST	<code>/api/career</code>	Start a new career run for an Uma Musume.

## 🌟 Blade Components (Reusable)

Component	Description
<code>x-umamusume::skill-card</code>	Styled input card for managing individual skill details.
<code>x-umamusume::stamina-bar</code>	Visual meter to represent stamina levels.
<code>x-umamusume::add-skill-button</code>	Button component to dynamically add new skill input rows.
<code>x-umamusume::remove-skill-button</code>	Button component to remove dynamic skill input rows.
<code>x-umamusume::aptitude-inputs</code>	Form inputs for managing Uma Musume aptitude ratings.
<code>x-umamusume::growth-rate-inputs</code>	Form inputs for managing Uma Musume growth rate bonuses.
<code>x-umamusume::initial-career-run-form</code>	Form section for logging initial stats and career run details.
<code>x-umamusume::responsive-grid</code>	A wrapper component for creating responsive grid layouts.
<code>x-umamusume::animated-transition</code>	Alpine.js-driven component for smooth UI transitions (e.g., success messages, item addition/removal).

## Future Roadmap

Planned Feature	Description
 AI-assisted skill recommendations	Suggest optimal skills based on career progression and goals.
 Graphical stat trend visualizations	Interactive line graphs and charts to visualize stat progression over turns.
 Import/export legacy spreadsheets	Tools for converting and importing existing Uma Musume career logs from common spreadsheet formats.
 Skill icon detection / autocomplete	Real-time suggestion system for skill names, potentially with visual icons.
 Visual graphs of stat progression	User-friendly visual tools for deeper analysis of career data.
 Stat outcome predictors	Forecast future stat outcomes based on current progression and training choices.
 Role-based user collaboration	Implement user roles (e.g., Admin, Regular User) for shared tracking environments.

## Setup Instructions

To get the Uma Musume Career Tracker up and running on your local machine:

1. Clone the repository:  
````git clone https://github.com/extremesazr/uma-tracker.git````
2. Navigate to the project directory:
````cd uma-tracker````
3. Install PHP dependencies using Composer:  
````composer install````
4. **Set up environment variables:** Copy the example environment file and generate an application key:
````cp .env.example .env  
php artisan key:generate````  
Ensure you configure your database connection in the `.env` file.
5. **Run database migrations and seeders:** This will create the necessary tables and populate any initial data:  
````php artisan migrate --seed````
6. **Launch the development server:**
````php artisan serve````  
The application will typically be accessible at `http://127.0.0.1:8000`.

|-----------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-----------------------------------------|
| Hydrate                     | Mid-race stamina recovery                                     |  Recovery       | All runners                             |
| I Can See Right Through You | Widened view when moving laterally, avoids crowding           |  Debuff         | Gold Ship, tactical positioning         |
| Inner Post Proficiency      | Passive boost if bracket 1–3                                  |  Passive        | Position-aware runners                  |
| Inside Scoop                | Corner boost when near inner rail                             |  Acceleration   | Corner-savvy runners                    |
| Intense Gaze                | Stronger late race debuff                                     |  Debuff         | Competitive finishes                    |
| Iron Will                   | Recovery in crowded tracks early-race                         |  Recovery       | Pack runners                            |
| Late Surger Savvy           | Assist positioning for late runners                           |  Positioning    | Vodka                                   |
| Lay Low                     | Fatigue recovery when boxed-in early                          |  Recovery       | Pack runners                            |
| Level Headed                | Regain composure amid jam mid-race                            |  Recovery       | All runners                             |
| Lucky Seven                 | Random boost if in bracket 7                                  |  Passive        | Gacha-starred runners                   |
| Medium Corners              | Corner boost on medium tracks                                 |  Acceleration   | Multi-distance runners                  |
| Nimble Navigator            | Improved maneuver in final spurt                              |  Positioning    | Vodka, Teio                             |
| Outer Post Proficiency      | Passive boost if bracket 6–8                                  |  Passive        | Bracket-dependent runners               |
| Pace Chaser Savvy           | Boosts positioning when closing from mid-pack                 |  Positioning  | Daiwa Scarlet, hybrid front/pace builds |
| Pace Chaser Straightaways   | Straight-line burst when pacing up from behind                |  Acceleration | Mid-pack / passers                      |
| Pace Strategy               | Increases speed when running at a moderate pace (not leading) |  Speed        | Daiwa Scarlet, pace-chaser fallback     |
| Position Pilfer             | Mid-race speed increase when in front                         |  Speed        | Pace/Front runners                      |
| Preferred Position          | Reduce mid-race stamina loss                                  |  Recovery     | Front or Pace runners                   |
| Prepared to Pass            | Burst in final corner for front packing                       |  Acceleration | Front runners                           |
| Pressure                    | Slight speed boost when passing another horse                 |  Acceleration | Gold Ship, End-Closer builds            |

| Skill                   | Description                                        | Stat Type                                                                                          | Best For                      |
|-------------------------|----------------------------------------------------|----------------------------------------------------------------------------------------------------|-------------------------------|
| Productive Plan         | Early lead stamina boost                           |  Recovery       | Front-runner builds           |
| Prudent Positioning     | Early-race position-keeping boost                  |  Positioning    | Position and front runners    |
| Rainy Days              | Performance boost in rainy weather                 |  Passive        | Versatile runners             |
| Red Ace Lv.2            | Speed boost in 2nd half when lead                  |  Speed          | Daiwa Scarlet                 |
| Red Shift/LP1211-M Lv.1 | Corner burst when leading in final corner or later |  Acceleration   | Daiwa Scarlet, Maruzensky     |
| Rosy Outlook            | Stem stamina loss when leading                     |  Recovery       | Front-runners like Scarlet    |
| Shake It Out            | Recover fatigue after multiple skills              |  Recovery       | Skill-heavy builds            |
| Sharp Gaze              | Debuff opponents ahead late-race                   |  Debuff         | Competitive finishes          |
| Shifting Gears          | Mid-race pass acceleration                         |  Acceleration   | Front runners                 |
| Shrewd Step             | Improved navigation                                |  Positioning    | All runners                   |
| Sky-High Teio Step Lv.1 | Closing-speed boost on final straight              |  Acceleration   | Tokai Teio                    |
| Slick Surge             | Late-race acceleration boost                       |  Acceleration   | Vodka                         |
| Slipstream              | Reduce wind drag following another                 |  Acceleration   | Pacer / stalkers              |
| Soft Step               | Sideways movement stamina recovery                 |  Recovery       | Pack or multi-strategists     |
| Stamina To Spare        | Reduce early-race stamina loss                     |  Recovery      | Long-distance runners         |
| Straightaway Adept      | Straight-speed burst                               |  Speed        | Front or pace strategies      |
| Straightaway Recovery   | Recover stamina on straight segments               |  Recovery     | Long-distance runners         |
| Straightaway Spurt      | Final straight acceleration burst                  |  Acceleration | Vodka                         |
| Studious                | Improves observation mid-race                      |  Wit boost    | All runners                   |
| Thunderbolt Step        | Avoid being boxed in back-mid race                 |  Positioning  | Pack movers                   |
| Trick (Front)           | Fatigue opponents behind                           |  Debuff       | Daiwa Scarlet, El Pasa Condor |
| Trick (Rear)            | Debuff racers when boxed behind                    |  Debuff       | Strategic lead builds         |

# Uma Musume Career Run Log Sheet

## # 🏠 Uma Tracker (Legacy)

![Uma Tracker Logo] (<https://i.imgur.com/XYZ1234.png>)

Track, manage, and optimize your Uma Musume training careers

---

![Build Status] (<https://github.com/extremearazr/uma-tracker/workflows/tests/badge.svg>)

![Laravel Version] (<https://img.shields.io/badge/Laravel-11+-FF2D20?logo=laravel>)

![PHP Version] (<https://img.shields.io/badge/PHP-8.2+-777BB4?logo=php>)

![License] (<https://img.shields.io/badge/License-MIT-blue.svg>)

---

## ## 🌟 Features

### ### Training Management

- 🐎 Complete character profiles with aptitudes
- 📊 Turn-by-turn stat tracking (Speed/Stamina/Power/Guts/Wit)
- 🧠 Skill acquisition logging with SP management
- 📈 Growth rate bonus tracking

### ### Game-Inspired UI

- 🏠 Authentic Uma Musume visual style
- 🌙 Dark/light mode toggle
- 📱 Fully responsive mobile interface
- 🎮 Interactive training dashboard

### ### Data Tools

- ⬇️ Excel export for career runs
- 🔍 Skill search and autocomplete
- 📊 Stat progression visualization
- 🔄 Import/export functionality

---

## ## 🛠️ Technology Stack

### #### Backend

- Laravel 11+ (legacy)
- PHP 8.2+
- MySQL/MariaDB

### #### Frontend

- Blade Components
- Tailwind CSS
- Alpine.js
- Laravel Livewire (partials)

### #### Extensions

- Laravel Excel (Maatwebsite)
- Laravel Sanctum (API)

---

## ## 🚀 Quick Start

### ### Prerequisites

- PHP 8.2+
- Composer 2.0+
- Node.js 16+
- MySQL 5.7+

### ### Installation

```
```bash
```

```
# Clone repository
```

```
# (Legacy repo URL, update if needed)
```

```
git clone https://github.com/extremerazr/uma-tracker.git
```

```
cd uma-tracker

# Install dependencies
composer install
npm install && npm run build

# Configure environment
cp .env.example .env
php artisan key:generate

# Set up database (edit .env first)
php artisan migrate --seed

# Run development server
php artisan serve
...

Visit `http://localhost:8000` and login with:
```

```
-  `test@example.com`
-  `password`
```

📁 Project Structure

```
```text
uma-tracker/
├── app/
│ ├── Exports/ # Excel export handlers
│ ├── Http/Controllers/ # Application logic
│ ├── Models/ # Database models
│ └── View/Components/ # Blade components
├── database/
│ ├── factories/ # Test data generators
│ ├── migrations/ # Database schema
│ └── seeders/ # Initial data
├── resources/
│ ├── js/ # Alpine.js components
│ └── views/ # Blade templates
```

```
| └─ css/ # Tailwind styles
| └─ routes/ # Application endpoints
| ...
```

---

## ## 🧩 Core Components

| Component                                  | Description                                |
|--------------------------------------------|--------------------------------------------|
| <code>&lt;x-uma::skill-card&gt;</code>     | Interactive skill management card          |
| <code>&lt;x-uma::stamina-bar&gt;</code>    | Animated stamina gauge                     |
| <code>&lt;x-uma::stat-radial&gt;</code>    | Circular stat progress indicator           |
| <code>&lt;x-uma::aptitude-badge&gt;</code> | Style/distance/track suitability indicator |
| <code>&lt;x-uma::training-log&gt;</code>   | Turn history timeline                      |

---

## ## 🛠️ API Endpoints

### \*\*Character Management\*\*

- `GET /api/uma` - List characters
- `POST /api/uma` - Create new character
- `GET /api/uma/{id}` - Character details

### \*\*Career Tracking\*\*

- `POST /api/career` - Start new career
- `POST /api/career/{id}/stats` - Log turn stats
- `POST /api/career/{id}/skills` - Manage skills

### \*\*Data Export\*\*

- `GET /api/export/career/{id}` - Excel export
- `GET /api/export/skills` - Skill report

---

## ## 🗺️ Roadmap (Legacy)

### ### v1.2 (Current)

- [x] Dark mode support
- [x] Mobile optimization
- [ ] Enhanced stat charts

### ### v1.3 (Next)

- [ ] AI training suggestions
- [ ] Race simulation
- [ ] Multi-language support

### ### v2.0 (Future)

- [ ] Team management
- [ ] Scenario builder
- [ ] Community sharing

---

## ## 🤝 Contributing

1. Fork the repository
2. Create your feature branch (`git checkout -b feature/amazing-feature`)
3. Commit your changes (`git commit -m 'Add amazing feature'`)
4. Push to the branch (`git push origin feature/amazing-feature`)
5. Open a Pull Request

---

## ## 📄 License

**\*\*Note:\*\*** This is a legacy/deprecated version of Uma Tracker. For the latest features, bug fixes, and documentation, please refer to the main ``README.md`` in this repository.

# SPEC-06-UMA-MUSUME-UI-AS-BUILT

## Background

This specification documents the current frontend structure and styling implementation of the **Uma Musume Race Planner** as it exists in production (as-built). It reflects user-facing enhancements aligned with the look and feel of *Uma Musume: Pretty Derby*, implemented using **Bootstrap 5**, **vanilla JavaScript**, and **custom CSS** variables for dark mode and stat color theming.

## Requirements

### Must Have

- Bootstrap-based responsive UI
- Familiar stat colors and icons for Uma Musume players
- Career form with dynamic tabs and inputs
- Mobile-friendly interaction (touch targets, sticky buttons)
- Export plans as styled text output

### Should Have

- Dynamic row builders for skills, goals, predictions
- Plan detail modals and inline cards
- Skill styling similar to game layout
- Themed dark mode toggle with smooth transitions

### Could Have

- Inline growth stat calculators

- Avatar image upload/preview
- Game-themed icons in skill/plan views

### Won't Have

- Use of game-proprietary assets, fonts, or character images

## Method

### 1. Visual & UX Strategy

#### UI Aesthetic

The UI mimics the structure and feeling of the official game using Bootstrap 5 cards, badges, gauges, and color-coded stats. The font stack is system-native with Japanese support where needed.

#### Persistent Energy Gauge

A top-of-form slider input (`<input type="range">`) represents stamina with a dynamic numeric display (**Energy: 60%**). This mimics the in-game energy gauge during training sessions.

#### Stat Color Coding

CSS Variables (`--color-speed`, `--color-stamina`, etc.) define consistent themes:

| Stat    | Color Code | CSS Var                      |
|---------|------------|------------------------------|
| Speed   | #3399ff    | <code>--color-speed</code>   |
| Stamina | #33cc99    | <code>--color-stamina</code> |
| Power   | #ff4d4d    | <code>--color-power</code>   |
| Guts    | #ffa500    | <code>--color-guts</code>    |
| Wit     | #9933ff    | <code>--color-wit</code>     |

These are applied to sliders, badges, and text borders dynamically in JS.

### 2. Layout & Component Designs

## 2.1 Dashboard (index.php)

- **Banner Header:** “Uma Musume Planner” with Bootstrap icon.
- **Grid Layout:** Bootstrap `container > row > col` split.
  - Left Column: Plan List
  - Right Column: Stat Overview (optional future)

## 2.2 Plan List (plan-list.php)

- Displayed as a **Bootstrap Table** inside a `.card`.

Action Buttons: `Edit`, `Preview`, `Delete` use icons like:

```
<i class="bi bi-pencil-square"></i>
```

- 

## 2.3 Plan Details (plan-inline-details.php)

- Tabs for **General**, **Attributes**, **Skills**, **Predictions**, **Goals**.
- Includes:
  - Skill acquisition switch
  - Energy slider
  - Dynamic row creation via JS
  - Inline export as TXT
- Cards and sliders styled using Bootstrap 5 and scoped CSS.

## 3. Component Examples

### Skill Row (JS Generated)

```
<tr>
 <td><input type="text" class="form-control form-control-sm skill-name-input"></td>
 <td><input type="number" class="form-control form-control-sm skill-sp-cost-input"></td>
```

```

<td class="text-center"><input type="checkbox" class="form-check-input
skill-acquired-checkbox"></td>
<td><select class="form-select form-select-sm skill-tag-select">...</select></td>
<td><input type="text" class="form-control form-control-sm skill-notes-input"></td>
<td><button class="btn btn-danger btn-sm remove-skill-btn"><i class="bi
bi-trash"></i></button></td>
</tr>

```

### Energy Bar

```

<label for="energyRange" class="form-label">Energy (60%)</label>
<input type="range" class="form-range" min="0" max="100" id="energyRange">

```

### Dark Mode Styling (style.css)

```

:root {
 --bg: #ffffff;
 --text: #212529;
 --card-bg: #f8f9fa;
 --color-speed: #3399ff;
 --color-stamina: #33cc99;
 ...
}

body.dark-mode {
 --bg: #121212;
 --text: #f1f1f1;
 --card-bg: #1e1e1e;
}

```

## Implementation

### Stack

- **Frontend:** HTML5 + Bootstrap 5 + JavaScript
- **CSS:** Bootstrap overrides in `css/style.css`
- **Icons:** Bootstrap Icons
- **Font:** System stack (`Segoe UI`, `sans-serif`)
- **Structure:** PHP Components (`components/*.php`)

- **Dark Mode:** `#darkModeToggle` JS and CSS class toggling

## File Highlights

| File                                            | Role                         |
|-------------------------------------------------|------------------------------|
| <code>index.php</code>                          | Main page                    |
| <code>components/navbar.php</code>              | Nav with dark mode toggle    |
| <code>components/plan-inline-details.php</code> | Editable plan form           |
| <code>js/autosuggest.js</code>                  | Skill & plan suggestions     |
| <code>css/style.css</code>                      | App-wide style and dark mode |

## Milestones

| Milestone                | Status |
|--------------------------|--------|
| Bootstrap 5 integration  | ✓      |
| Stat color system        | ✓      |
| Plan editor UI tabs      | ✓      |
| Skill table rows         | ✓      |
| Dark mode with toggle    | ✓      |
| TXT export functionality | ✓      |

## Gathering Results

### Evaluation Checklist

- Mobile rendering verified on Chrome and Safari
- Dark mode toggle persisted per session

- Export feature works on inline and modal form
- UI follows contrast and touch accessibility
- No copyright assets used

## Recommended Analytics

- Basic usage tracking via Plausible or Matomo
- Export/download events
- Skill tab interaction tracking

## Summary

The *Uma Musume Race Planner* delivers a clean, mobile-friendly, game-inspired interface for career tracking, with UX elements that resonate with fans of the franchise. It strikes a balance between **visual familiarity**, **functional clarity**, and **technical independence**, providing a reliable planning tool while honoring copyright boundaries.

align your application more closely with the official Uma Musume aesthetic, there are several UI/UX elements you can incorporate without violating copyright but still enhancing familiarity and engagement for fans:

## Design Cues to Match Uma Musume

| Element               | Recommendation                                                                                                                                                         |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Typography            | Use a rounded, playful sans-serif font like ' <b>M PLUS Rounded 1c</b> ', which is also used on the <a href="#">JP site</a> . Include via Google Fonts or self-hosted. |
| Color Palette         | Use the official color scheme: <b>#ba55d3</b> (purple), <b>#ffb6c1</b> (pink), soft blues and golds for highlights. Use these in headers, buttons, and accents.        |
| Buttons & Tabs        | Use large, gradient-styled buttons with iconography (e.g. horse shoes, stars).                                                                                         |
| Cards                 | Apply soft shadows, rounded corners, background gradients, and vibrant hover effects.                                                                                  |
| Icons                 | Use Bootstrap icons where appropriate, but supplement with custom SVGs for game-like stats (e.g. stamina, speed, wit).                                                 |
| Animations            | Add light UI animation for transitions (tabs, modals, sliders). Use <b>animate.css</b> or custom CSS transitions.                                                      |
| Audio Cues (Optional) | Add toggleable chime/voice effects on actions like save or delete, similar to what games do. Optional, of course.                                                      |

## Specific Components That Can Be Skinned

| UI Part      | Suggestion                                                                                                          |
|--------------|---------------------------------------------------------------------------------------------------------------------|
| Stat Bars    | Style like the in-game training view: colored progress bars with stat icons and bold labels (Speed, Stamina, etc.). |
| Skill Table  | Include colored borders/tags for skill rarity or type, just like in the game.                                       |
| Growth Chart | Customize Chart.js line charts with pastel colors and drop shadows, themed to in-game colors.                       |
| Tabs/Modals  | Use rounded pill-shaped tabs, bright hover effects, and transition                                                  |

animations.

Plan Card /  
Preview

Add a small card that mimics the game's race or training plan layout, perhaps showing stats on the left and upcoming goals on the right.

# SPEC-05-UMA-MUSUME-UI-DESIGN

## Background

This specification guides the redesign of the *Uma Musume Race Planner* UI to reflect the official game's visual style while remaining compliant with copyright. The app targets planners and min-maxers who want a streamlined, polished, and thematic experience tailored to Uma Musume: Pretty Derby fans.

## Requirements

### Must Have

- Visually distinct UI reflecting Uma Musume game style
- Mobile-first responsive layout
- Color-coded stat and skill visuals
- Clear, clean data display for career planning
- Accessible color contrast and keyboard navigation

### Should Have

- Avatar display and stat progress bars styled like the game
- Reusable components: skill card, stat bar, plan card
- Export options styled with game-themed buttons
- Hover/transition animations

### Could Have

- Themed audio/visual cues (e.g., sound effects on submit)
- AI SP optimization suggestions
- Game-style modal previews

### Won't Have

- Direct usage of copyrighted assets or fonts from the game

## Method

### Visual & UX Style Guide

#### Typography

- Use **"M PLUS Rounded 1c"** from Google Fonts for rounded, friendly Japanese-style UI (used in JP official site).
- Backup: **"Figtree"**, **"Inter"**, or **"Helvetica Neue"**

#### Color Palette

| Stat    | Symbol                                                                              | Color   | Tailwind (base) |
|---------|-------------------------------------------------------------------------------------|---------|-----------------|
| Speed   |  | #3399ff | blue-500        |
| Stamina |  | #33cc99 | green-500       |
| Power   |  | #ff3333 | red-500         |
| Guts    |  | #ff9900 | orange-500      |

Wit

#9933ff

purple-500

Use these in stat bars, tags, and headers.

## UI Patterns

- Stat Bars: gradient + icon prefix, animated width.
- Cards: white background, pastel borders, drop shadow.
- Buttons: pill-shaped with emoji/icon label (e.g., 🔄 Update, ✨ Preview).
- Tabs: colorful, hover/active transition, rounded.

## 🧩 Component Blueprints

### x-stat-bar

```
<div class="relative w-full h-4 bg-gray-200 rounded-full overflow-hidden">
 <div class="h-full transition-all duration-300" style="width: {{ $percent }}%; background-color:
var(--stat-color);"></div>
</div>
<p class="text-sm mt-1 font-semibold text-gray-600">⚡ Speed: {{ $value }}/1200</p>
```

### x-skill-card

```
<div class="bg-white shadow-md border-l-4 border-blue-500 rounded-lg p-3 flex items-center
space-x-3">
 Hydrate
 20 SP
 <input type="checkbox" class="form-checkbox">
 <input type="text" class="flex-1 border-none" placeholder="Notes">
</div>
```

- `border-color` changes with skill tag (e.g., `border-red-500` for offensive)

### x-plan-card

```
<div class="p-4 bg-white shadow-md rounded-md hover:shadow-lg transition">
 <h5 class="text-lg font-bold">🐉 {Plan Title}</h5>
 <p class="text-sm text-gray-600">Turn: 5/70 | SP: 320</p>
 <div class="mt-2 flex gap-2">
 Dirt
 Mile
 </div>
</div>
```

## Layout Structure

### Dashboard

- Grid of action cards: " New Plan", " View Plans", " Export All"
- Welcome banner with your Trainer ID (optional)
- Gamified stats (e.g., 5 active plans, 2 completed)

### Plan List

- Responsive cards in two-column layout
- Dropdown filters for class, status, or style
- Quick action icons ( Edit,  Export,  Preview)

### Plan Form

- Tabs: General, Attributes, Skills, Grades, Predictions
- Floating Turn & SP summary bar at the top (like stamina bar in-game)
- Skills use **x-skill-card** layout
- Growth rate and attribute sliders use colored UI
- "Save" and "Export TXT" are sticky on mobile

## PlantUML: High-Level UI Structure

@startuml

skinparam backgroundColor #fdfdfd

skinparam componentStyle rectangle

package "Frontend UI" {

[Dashboard] --> [Plan List]

[Plan List] --> [Plan Detail Form]

[Plan Detail Form] --> [Skills Tab]

[Plan Detail Form] --> [Attributes Tab]

[Plan Detail Form] --> [Aptitude Grades Tab]

```
[Plan Detail Form] --> [Race Predictions Tab]
}
```

```
[Plan List] --> [Export Modal]
[Plan Detail Form] --> [x-stat-bar]
[Plan Detail Form] --> [x-skill-card]
@enduml
```

## Implementation

### Steps

1. Add Tailwind CSS or Bootstrap 5 + custom SCSS
2. Install **M PLUS Rounded 1c** via Google Fonts
3. Create and register UI components (**x-stat-bar**, **x-skill-card**, etc.)
4. Replace plain HTML with components inside form and list templates
5. Use JavaScript (Alpine.js or plain JS) for:
  - Skill rows
  - Stat gauges
  - Turn/SP overlays
6. Apply transitions and hover effects using CSS utilities
7. Add favicon, site metadata, and polished footer

### Milestones

| Milestone                | Target Date | Status |
|--------------------------|-------------|--------|
| Wireframes in Figma      | ✅ Done      | ✓      |
| Component system defined | ✅ Done      | ✓      |
| Dashboard UI updated     | Aug 2       | 🕒      |

|                            |       |                                                                                   |
|----------------------------|-------|-----------------------------------------------------------------------------------|
| Plan List redesign         | Aug 4 |  |
| Skill Cards/Stat Bars      | Aug 5 |  |
| Mobile sticky footer + nav | Aug 6 |  |
| UI accessibility review    | Aug 8 |  |

---

## Gathering Results

### Metrics to Observe:

- User time on task: How fast is a plan filled?
- Mobile bounce rate: Do mobile users drop?
- Accessibility audit pass (e.g., Lighthouse score)

### Methods:

- Session recordings (e.g., Plausible or open-source analytics)
- Feedback prompt in footer: “ Help us improve this UI!”

## Detailed Frontend Improvement Plan (Version 2.0)

The core goal is to increase visual polish, streamline data entry, and provide more insightful data visualizations, making the application feel even more like a premium companion tool for the game.

### 1. Global Changes: Theme & Branding

These changes will apply across the entire application to create a more unique and polished visual identity.

- **The "Why" (User Benefit):** To move away from a default Bootstrap feel towards a custom, branded experience that feels more connected to the *Uma Musume* game.
- **The "What" (Visual/Interaction Design):**
  - **Typography:** Introduce a new primary font, such as "Figtree" or "Montserrat" from Google Fonts. This will be used for all major headings and UI elements.
  - **Iconography:** Create a set of custom SVG icons for the five core stats (e.g., ⚡ for Speed, 🛡️ for Stamina). These icons will be used in the plan editor and on the dashboard to replace text labels where appropriate, adding visual flair.
- **The "How" (Implementation Notes):**
  - The new font would be imported via a `<link>` tag in the `<head>` of `index.php` and `guide.php`.
  - The `font-family` property in `style.css` would be updated to use the new font.
  - The new SVG icons would be added to the relevant HTML-generating JavaScript functions in `index.php`.

---

### 2. The Dashboard (Homepage) Enhancements

These changes will make the main dashboard more dynamic and informative at a glance.

- **The "Why" (User Benefit):** To allow users to assess their plans more quickly and to find specific plans more easily as their list grows.
- **The "What" (Visual/Interaction Design):**
  - **At-a-Glance Stat Bars:** Directly within the "Your Race Plans" table, add a small, horizontal bar for each of the five stats under the trainee's name. The length and color of the bar would correspond to the stat's value, providing a quick visual summary of each plan's focus.
  - **Filtering Controls:** Above the table, add a set of filter buttons (e.g., `[ All | Active | Planning | Finished ]`). Clicking a button would instantly filter the list of plans to show only those with the selected status.
- **The "How" (Implementation Notes):**
  - **Stat Bars:** The JavaScript `updatePlanList` function in `index.php` would be modified. When rendering each plan row, it would include the new HTML for the five mini-bars. New CSS rules would be added to `style.css` to style these bars.

- **Filtering:** The HTML for the filter buttons would be added to `plan-list.php`. An event listener in `index.php` would handle clicks, filtering the plan data on the client-side and re-rendering the table.

---

### 3. The Plan Editor Enhancements

These changes focus on streamlining the data entry process within the "Plan Details" modal, making it faster and more user-friendly.

- **The "Why" (User Benefit):** To reduce manual typing, prevent errors, and provide helpful information directly within the form, making the planning process much more efficient.
- **The "What" (Visual/Interaction Design):**
  - **Skill Autocomplete:** In the "Skills" tab, as a user types into the "Skill Name" input, a dropdown list of matching skills from the game's reference data will appear. Selecting a skill will auto-fill the input.
  - **Contextual Skill Information:** When a skill is selected via autocomplete, a small, read-only text box will appear below that row, displaying the skill's description and properties.
  - **Visual Stat Input Sliders:** In the "Attributes" tab, enhance the stat inputs. Each stat would be represented by a component that includes the new stat icon, the stat name, a visual slider, and the number input. The slider and number input would be synced.
- **The "How" (Implementation Notes):**
  - **Autocomplete:** This would be a new JavaScript feature in `index.php`. The data from the `get_skill_reference.php` API endpoint would be fetched and stored. An event listener on the skill inputs would trigger the filtering and display of the autocomplete dropdown.
  - **Stat Sliders:** The `renderModalAttributes` function in `index.php` would be updated to generate the new HTML structure for the slider component. JavaScript event listeners would be added to keep the slider and number input synchronized. New rules in `style.css` would be needed to style the sliders.

---

### 4. New Feature: Data Visualization

Introduce a new feature that provides powerful visual insight into a plan's progression.

- **The "Why" (User Benefit):** To transform raw numbers into an easy-to-understand chart, allowing users to see their character's growth trajectory and identify trends over their career.
- **The "What" (Visual/Interaction Design):**
  - **Turn History Growth Chart:** Add a new tab in the Plan Editor called **"Progress Chart."** This tab will display a line chart. The X-axis will represent the turn number, and the Y-axis will represent the stat value. Five colored lines will plot the progress of Speed, Stamina, Power, Guts, and Wit over the entire training plan.

- **The "How" (Implementation Notes):**
  - The HTML for the new tab would be added to [plan\\_details\\_modal.php](#).
  - A lightweight charting library (like Chart.js) would be added via a CDN link in [index.php](#).
  - A new JavaScript function in [index.php](#) would be created to take the existing data from the [get\\_plan\\_turns.php](#) API call and use the charting library to render the graph when the "Progress Chart" tab is activated.

---

## Summary of Frontend Changes

| Improvement Area            | Proposed Feature                | User Benefit                               | Frontend Files Involved (for future modification)                                                        |
|-----------------------------|---------------------------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Theme &amp; Branding</b> | Custom Font & Icons             | Polished, game-authentic visual identity.  | <a href="#">index.php</a> , <a href="#">guide.php</a> , <a href="#">style.css</a>                        |
| <b>Dashboard</b>            | At-a-Glance Stat Bars & Filters | Faster assessment and better organization. | <a href="#">index.php</a> (JS), <a href="#">style.css</a> , <a href="#">plan-list.php</a> (HTML)         |
| <b>Plan Editor</b>          | Skill Autocomplete & Info       | Faster, error-free data entry.             | <a href="#">index.php</a> (JS), <a href="#">style.css</a>                                                |
| <b>Plan Editor</b>          | Visual Stat Input Sliders       | More interactive and engaging editing.     | <a href="#">index.php</a> (JS), <a href="#">style.css</a>                                                |
| <b>Data Visualization</b>   | Turn History Growth Chart       | Powerful insight into training progress.   | <a href="#">index.php</a> (JS), <a href="#">plan_details_modal.php</a> (HTML), <a href="#">style.css</a> |

# Design Documentation: UMA MUSUME RACE PLANNER (As-Built Version)

## 1. Purpose & Audience

The primary users are players of *Uma Musume: Pretty Derby* who want an intuitive, mobile-friendly tool to meticulously plan and track their characters' careers.

### Goals:

- Streamlined logging of stat development.
- An intuitive interface for planning SP usage and skill acquisition.
- The ability to export career data as a **formatted plain-text summary** for analysis and sharing.
- A visually enriched UI that is clean, engaging, and inspired by the aesthetic of the original game.

## 2. Visual & UX Inspirations

The application adopts key UI elements from *Uma Musume* to create a familiar and engaging experience.

- **Persistent Gauges:** The game features top-screen stamina bars. The application replicates this with an **Energy slider** (`<input type="range">`) in the plan editor, which provides clear numeric feedback.
- **Stat Color Coding & Badges:** The five core stats have distinct colors in-game. The application uses a custom color palette (`--primary-color`, etc.) and **Bootstrap Badges** with custom classes (e.g., `.bg-active`, `.grade-s`) to visually represent status and grades.
- **Component Styling:** The application uses **Bootstrap 5 Card** components with custom CSS to create a clean, organized, and layered interface, reminiscent of the game's structured menus.

## 3. Layout & Component Designs

### 3.1 Dashboard

- A prominent header banner welcomes the user.
- A responsive **Bootstrap 5 grid** organizes the main content: the plan list on the left, and panels for stats and recent activity on the right.
- User interaction is handled dynamically, with components updating in place without page reloads.

### 3.2 Plan List

- A main card component contains a **Bootstrap Table** that lists all plans.
- Interactive buttons (**Edit**, **View Details**, **Delete**) provide clear actions for each plan.
- The table is fully dynamic, rendered and updated by JavaScript fetching data from the backend.

### 3.3 Career Run Form

- The form is presented within a **Bootstrap Modal** or an inline details view, using **Bootstrap Tabs** to separate sections (General, Attributes, Skills, etc.).
- **Vanilla JavaScript** powers dynamic rows in the Skills, Predictions, and Goals tables, allowing users to add or remove entries easily.
- Inputs are standard **Bootstrap Form Controls** (`.form-control`, `.form-select`), ensuring a consistent and responsive layout.

#### 4. Component Implementation

The application is built with **Bootstrap 5** and custom CSS, not Tailwind CSS. Components are structured as server-side **PHP includes**.

- **plan-list.php**: Renders the main table structure that is later populated by JavaScript.
- **plan\_details\_modal.php**: Defines the HTML structure for the comprehensive editing modal, including the tabbed interface.
- **JavaScript createModalSkillRow() function**: This client-side function generates the HTML for a new skill entry row, using Bootstrap classes. A simplified representation is:
- HTML

```
<td><input type="text" class="form-control form-control-sm skill-name-input"></td>
<td><input type="number" class="form-control form-control-sm skill-sp-cost-input"></td>
<td class="text-center"><input type="checkbox" class="form-check-input
skill-acquired-checkbox"></td>
<td><select class="form-select form-select-sm skill-tag-select">...</select></td>
<td><input type="text" class="form-control form-control-sm skill-notes-input"></td>
<td><button class="btn btn-danger btn-sm remove-skill-btn">...</button></td>
```

- 

#### 5. Branding & Aesthetic

- **Color System**: The UI uses a custom color palette defined in `style.css` with CSS variables.
- **Icons**: The interface is enhanced with **Bootstrap Icons** (e.g., `<i class="bi bi-pencil-square"></i>`).
- **Typography**: The font stack is a clean, system-native sans-serif set: "Segoe UI", Tahoma, Geneva, Verdana, sans-serif.
- **Animations**: Subtle CSS `transition` effects are used for smooth theme changes (Dark Mode) and hover states.

#### 6. Responsive Strategy

- **Mobile-First Grid**: The entire layout is built on Bootstrap 5's mobile-first flexbox grid, ensuring the application is usable on all screen sizes.
- **Touch Targets**: Buttons and form controls adhere to Bootstrap's default sizing, which provides adequate touch targets for mobile users.

#### 7. Accessibility & UX

- **Color Contrast:** The custom theme and dark mode are designed with readability in mind.
- **Form Usability:** All form inputs have permanently visible `<label>` elements for clarity.
- **Keyboard Navigation:** The use of standard Bootstrap components ensures a high degree of keyboard navigability for modals, forms, and buttons.

## 8. Implementation Flow

1. **Backend API:** PHP scripts were created to serve data securely as JSON endpoints.
2. **Frontend Structure:** A main `index.php` file was built to assemble the UI from PHP components.
3. **Dynamic Logic:** A comprehensive vanilla JavaScript module was written to handle API calls, dynamic DOM updates, and form submissions.

## 9. Mobile-First Layout (Mock-up)

This mock-up illustrates the intended layout, which is achieved using Bootstrap 5 components.

[ Header: UMA MUSUME PLANNER ]

[ Plan List Card ]

Plan 1      [ Edit ] [ View ] [ Del ]

Plan 2      [ Edit ] [ View ] [ Del ]

...

## 10. Roadmap & Enhancements

This section outlines potential future features to improve the application.

| Feature            | Benefit                             |
|--------------------|-------------------------------------|
| Radial Stat Charts | Quick visual insights for each run. |

|                         |                                       |
|-------------------------|---------------------------------------|
| Turn History Timeline   | Replay career progression visually.   |
| Avatars & Support Icons | Game-like personalization.            |
| AI Skill Suggestions    | SP optimization and training support. |
| Animated Interactions   | Dynamic feedback and visual polish.   |

## 11. Summary

By leveraging the robust **Bootstrap 5** framework and dynamic **vanilla JavaScript**, the UMA MUSUME RACE PLANNER offers a polished and user-friendly platform. It successfully mirrors the clarity and organizational depth of the original game, providing players with a powerful and authentic-feeling tool for career planning.

# Design Documentation: UMA MUSUME RACE PLANNER

## 1. Purpose & Audience

The primary users are players of *Uma Musume: Pretty Derby* who want an intuitive, mobile-friendly tool to meticulously plan and track their characters' careers.

### Goals:

- Streamlined logging of turn-by-turn stat development.
- An intuitive interface for planning SP usage and skill acquisition.
- The ability to export career data for analysis and sharing in spreadsheet formats.
- A visually enriched UI that is clean, engaging, and inspired by the aesthetic of the original game.

## 2. Visual & UX Inspirations

The application will adopt key UI elements from *Uma Musume* to create a familiar and engaging experience.

- **Persistent Gauges:** The game prominently features top-screen stamina and progress bars. We will replicate this with persistent "Turn" and "Stamina" gauges, using numeric overlays for clarity.
- **Stat Color Coding:** The five core stats have distinct colors in-game, which we will map directly:
  - ⚡ Speed = blue
  - 🛡️ Stamina = green
  - 🔥 Power = red
  - 💪 Guts = orange
  - 🧠 Wit = purple
- **Skill Card Design:** The in-game skill screens use styled cards with icons. We will translate this into Tailwind-styled skill cards with color-coded left borders to indicate skill type.

## 3. Layout & Component Designs

### 3.1 Dashboard

- A welcome banner or personalized greeting.
- A responsive grid of quick-action cards linking to the Plan List, Export functions, and the creation form.
- Cards will be styled as colored buttons with hover shadows.

### 3.2 Plan List

- A prominent title, such as "🏇 Uma Musume Plan List."
- Buttons for "Preview" and "Export" styled to match the data type.
- Individual plan cards will display the character's name, style/track tags, and provide navigation to the detailed career page.

### 3.3 Career Run Form

- **Header:** An avatar/name section, a "Turn X/Y" label, and the stamina gauge.
- **Stats Grid:** Inputs with inline progress bars or circular indicators showing the value out of 1200.
- **Aptitude Grades:** Dropdowns for Turf/Dirt/Sprint/Mile/etc., with grades from A to G.
- **Skills Section:** Alpine.js will power dynamic rows, allowing users to add or remove skills easily.
- **Layout:** For longer forms, collapsible sections or tabs will be used to reduce clutter, especially on mobile.

### 4. Component Blueprint

This section provides concrete code examples for key reusable components.

- **x-stat-bar:** A horizontal progress bar for Turn and Stamina gauges.
- HTML

```
<div class="h-4 bg-gray-200 rounded-full overflow-hidden">
 <div class="h-full bg-green-500 transition-all" style="width: {{ $turnPercent }}%"></div>
</div>
<p class="text-sm text-gray-600 mt-1">Turn {{ $currentTurn }}/{{ $maxTurns }}</p>
```

- 
- **x-skill-row:** The card for a single skill entry in the form.
- HTML

```
<div class="bg-white shadow rounded-lg p-4 flex items-center space-x-4 border-l-4
border-blue-500">
 <input name="skills[0][name]" class="flex-1" placeholder="Skill Name"/>
 <input name="skills[0][sp_cost]" class="w-16 text-center"/>
 <label class="flex items-center space-x-1">
 <input type="checkbox" name="skills[0][acquired]" />
 Acquired
 </label>
 <input name="skills[0][notes]" class="flex-1" placeholder="Notes"/>
</div>
```

- 
- (Note: The *border-blue-500* color will change based on the skill type).
- **x-card:** The display card for a plan in the main list.
- **x-modal-preview:** The modal used for export previews.

### 5. Branding & Aesthetic

- **Color System:** The UI will map directly to the game's palette for stats.
- **Icons:** Use game-style visual icons (⚡, 🛡️, 🔥, 💪, 🧠) for stats.
- **Typography:** Use a clean, modern sans-serif font like Figtree.

Notes: Mid-race recovery

...

-----

Total SP: 340  
[ Submit Career Run ]

### 10. Roadmap & Enhancements

This section outlines potential future features to improve the application.

| Feature                 | Benefit                                    |
|-------------------------|--------------------------------------------|
| Radial Stat Charts      | Quick visual insights for each run.        |
| Turn History Timeline   | Replay career progression like a race log. |
| Avatars & Support Icons | Game-like personalization.                 |
| AI Skill Suggestions    | SP optimization and training support.      |
| Animated Interactions   | Dynamic feedback and visual polish.        |

### 11. Summary

By weaving in the design hallmarks of *Uma Musume: Pretty Derby*—such as stamina gauges, color-coded stat bars, and a clear mobile-first layout—this application will offer an engaging, polished, and user-friendly platform. It will mirror the clarity and interactivity of the original game while providing powerful planning and tracking tools for its players.

# Uma-Tracker Design Documentation

## 1. 🎯 Purpose & Audience

Primary users: *Uma Musume: Pretty Derby* players who want a mobile-friendly, intuitive tool to:

- Log turn-by-turn stat development
- Plan and track SP usage and skill acquisition
- Share/export career data for analysis

### Goals:

- Streamlined career logging (stat growth & skill decisions)
- Planning interface tailored for SP and match strategies
- Excel export for tracking progression
- Visually enriched UI inspired by the original game

## 2. 🎮 Game Visual & UX Inspirations

### Training Dashboard & Gauge Design

The game prominently features top-screen stamina bars with numeric/gradient indicators—an approach we replicate with:

- Persistent “Turn” and “Stamina” progress bars
- Numeric percentage overlays for clarity

### Stat Color Coding

Five core stats (Speed, Stamina, Power, Guts, Wit) in-game have distinct visuals and color-codes. We'll map:

- ⚡ Speed = blue
- 🛡️ Stamina = green
- 🔥 Power = red

- 🦵 Guts = orange
- 🧠 Wit = purple

### Skill Cards & Overlays

The in-game skill screens use styled cards with icons and descriptions. We'll translate that design into:

- Tailwind-styled skill cards with colored left borders (type-coded)
- Modal overlays for logs or export previews, inspired by in-game popups

## 3. 🛠️ Screen & Component Layouts

### A) Dashboard

- Welcome banner
- Responsive grid links to Uma List, Export, and Form functions
- Tailwind colored button cards with hover shadows

### B) Uma List

- 🏠 Title with emoji and prominent padding
- Preview & Export buttons styled per data type
- Uma cards showing name, style, track tags, and navigation to career page

### C) Career Run Form

#### Sections:

1. **Header:** Uma avatar/name + "Turn X/Y" label + stamina gauge
2. **Stats Grid:** Inline progress bars and circular indicators (x/1200)
3. **Grade Inputs:** Dropdowns for Turf/Dirt/Sprint/Mile/etc. (A–G)
4. **Growth & Condition:** Text inputs with icons
5. **Skills Section:**
  - Alpine.js–driven dynamic rows

- Cards styled with color-coded borders
- Interactive inputs: skill name, SP cost, acquired checkbox, notes textarea
- Floating “+ Add Skill” button

6. **Total SP & Submit Button:** Fixed at bottom for quick access

## 4. 🌈 Visual & Interactive Design

### Stamina / Turn Bar:

```
<div class="h-4 bg-gray-200 rounded-full overflow-hidden">
 <div class="h-full bg-green-500 transition-all" style="width: {{
$turnPercent }}%"></div>
</div>
<p class="text-sm text-gray-600 mt-1">Turn {{ $currentTurn }}/{{
$maxTurns }}</p>
```

### Colored Stat Indicators & Radials

- Use SVG progress circles or ASCII bars
- Overlay numeric vs grade values

### Skill Card Template:

```
<div class="bg-white shadow rounded-lg p-4 flex items-center
space-x-4 border-1-4 border-blue-500">
 <input name="skills[0][name]" class="flex-1" placeholder="Skill
Name"/>
 <input name="skills[0][sp_cost]" class="w-16 text-center"/>
 <label class="flex items-center space-x-1">
 <input type="checkbox" name="skills[0][acquired]" />
 Acquired
 </label>
 <input name="skills[0][notes]" class="flex-1" placeholder="Notes"/>
</div>
```

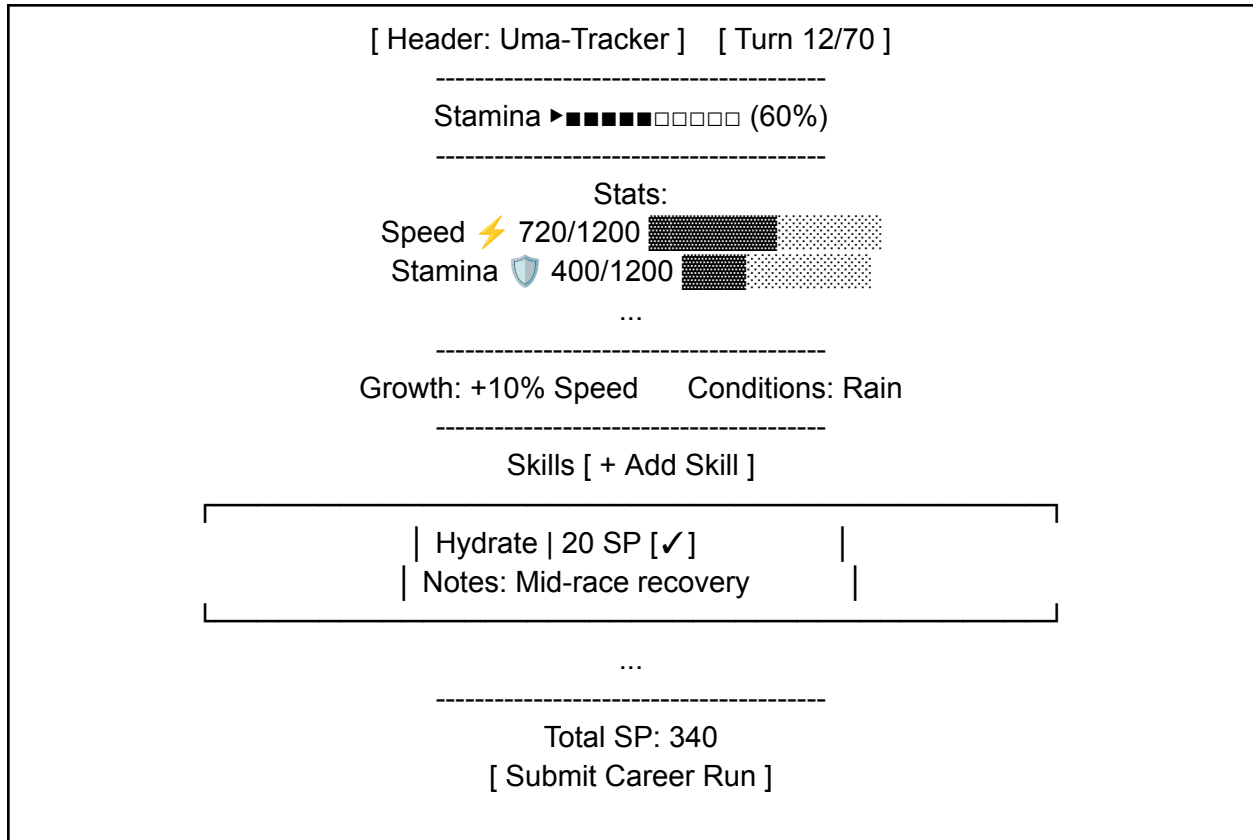

*(Border color adjusts per skill type: blue, red, yellow)*

**Responsive Layout:** Skill cards stack on narrow screens; grid expands to columns on larger viewports.

**Animated Feedback:** Use Alpine.js + Tailwind transitions for:

- Bar shake effects on stamina usage
- Green flashes when stats recover or achievements are unlocked

## 5. 📱 Mobile-First Layout (Overview)

## 6. 🧩 Component Library

- **x-card** – Uma display cards (list & dashboard)
- **x-stat-bar** – Horizontal stat meter with icon
- **x-skill-row** – Skill inputs within colored bordered card
- **x-progress-gauge** – Radial/circular progress
- **x-modal-preview** – Export preview modal with fade-in

## 7. 🗺️ Accessibility & Branding

- **Contrast & Accessibility:** Ensure WCAG AA compliance
- **Typography:** Figtree font for clean, modern look
- **Icons:** Use stat emojis or SVGs
- **Color Palette:** Bright, upbeat Cygames-themed hues

## 8. 🎯 Roadmap & Enhancements

| Feature                 | Benefit                              |
|-------------------------|--------------------------------------|
| Radial stat charts      | Quick visual insights per run        |
| Turn history timeline   | Replay career progression like race  |
| Avatars & support icons | Game-like personalization            |
| AI skill suggestions    | SP optimization and training support |
| Animated interactions   | Dynamic feedback and polish          |

## 9. ✅ Summary

By weaving in *Uma Musume: Pretty Derby*'s design hallmarks—stamina gauges, stat bars, tutorial cards, mobile-first layout, and responsive components—**Uma-Tracker** offers an engaging, polished, and user-friendly platform that mirrors the warmth, clarity, and interactivity of the original game.

# Design Documentation: Uma-Tracker System

## 1. Purpose & Audience

- **Primary users:** Uma Musume: Pretty Derby players who want to log career runs, track stats/skills, and plan SP usage.
- **Goals:**
  1. Streamlined logging of career progress (turn-by-turn stats).
  2. Easy skill planning interface with SP cost & notes.
  3. Exporting data in spreadsheet formats.
  4. Clean, engaging UI styled after the game's aesthetic.

## 2. Visual & UX Inspirations from the Game

### Key UI Elements from Uma Musume

| Feature                 | Description                                   |
|-------------------------|-----------------------------------------------|
| Character-Centric UI    | Bright, dynamic character icons and colors.   |
| Stat Bars & Icons       | Visual stat meters with color coding.         |
| Tabbed Layout for Modes | Separate views for Training, Race, Live Show. |
| Responsive Design       | Portrait-first UI with adaptive grid layouts. |

**Design takeaway:** Adopt a stat bar style with color-coded strength (Speed = blue, Stamina = green, etc.), and profile-style header cards for each Uma.

## 3. Layout & Component Designs

### Screen Structures

#### 3.1 Dashboard

- **Header:** Welcome section, personalized greeting.
- **Quick cards:** Rounded, colored buttons linking to Uma List, Export pages, Form.
- **Layout:** Mobile-first grid → 1 column; desktop → 3 columns.
- **Branding:** Use Cygames-style vibrant hues (blue, green) with hover shadows.

#### 3.2 Uma List

- **Title:** “ Uma Musume List”
- **Buttons:** Preview and Export links styled with matching colored backgrounds.
- **Cards:** Name, style/track tags, and link to career view.
- **Grid:** Responsive (1–3 columns).
- **Design:** Hover transitions, soft shadows, consistent padding.

#### 3.3 Career Run Form

- **Form Sections:**
  - **Character info:** Name, stage, condition.
  - **Stats:** Inputs with inline color-coded mini-progress bars or placeholders.
  - **Suitability:** Dropdowns with grade icons (A–G).
  - **Skills section:** Dynamic rows with autocomplete skill name & SP cost.
- **Interactivity:** Alpine.js for add/remove skill rows, inline validation.
- **Layout:** Collapsibles or tabs to declutter long forms.

- **Styling:** Group borders, hover on rows, mobile-friendly input stacking.

## 4. Branding & Aesthetic

- **Color system:** Map stat categories to game palette:
  - Speed = blue, Stamina = green, Power = red, Guts = orange, Wit = purple.
- **Icons:** Use stat icons from game (⚡, 🛡️, 🔥, 💪, 🧠).
- **Typography:** Modern sans-serif (Figtree via Laravel template).
- **Animations:** Subtle transitions on buttons, card hovers, toggles.

## 5. Responsive Strategy

- **Mobile-first grid:** Flex layout shifting from single to multi-column as screen widens.
- **Touch targets:** Ensure buttons and inputs  $\geq 44$ px high.
- **Form UI:** Collapsible skill section or accordion on mobile to reduce scroll.
- **Fixed footer:** on mobile with “Save” call-to-action always visible.

## 6. Component Blueprint

1. **x-card.blade.php:** Uma card with name, style badges, link.
2. **x-stat-bar.blade.php:** Displays colored stat with value.
3. **x-skill-row.blade.php:** Skill name, cost, acquired toggle, notes.
4. **x-responsive-grid.blade.php:** Adaptive grid wrapper.
5. **Tailwind Layout Utility:** for full-width + center padding containers.

## 7. Iconography & Fonts

- **Custom icons:** Use game-style visual stat icons (Speed ⚡ etc.).
- **Font pairing:**

- Headlines: Inter, Montserrat, or Figtree.
- Body: System UI or Figtree.
- **Buttons:** Rounded pills with accent background + drop-shadow.

## 8. Accessibility & UX

- **Color contrast:** Follow WCAG AA; add text labels with colored stat bars.
- **Form labels:** Always visible, with inline error messages.
- **Keyboard usability:** Tab indexes, ARIA-labels on dynamic skill rows.

## 9. Prototyping & Implementation Flow

### 1. Wireframe mockups in Figma:

- Dashboard
- Uma List grid
- Career form w/ dynamic skill rows

### 2. React/Alpine prototyping:

- Skill row repeater
- Stat bars
- Modal previews

### 3. UI review: Ensure mobile and desktop are visually consistent and intuitive.

## 11. Summary

The above design plan centers around:

- **Visual harmony** with Uma Musume game style,
- **Responsive, clean UX** across devices,
- **Interactive components** for easy data entry,
- **Accessibility-first** structure for all users.

With this foundation, development of a solid Figma prototype followed by implementation using Blade, Tailwind, and Alpine.js can bring the Uma-Tracker system to life with polish and practical elegance.

## uma-tracker SYSTEM IMPROVEMENT PROGRESS

To fully enhance your Uma-Tracker Laravel system for:

✓ Full implementation using Blade components

🌙 Dark mode styling

📱 Skill card icon injection or skill search/autocomplete integration

We'll update and enhance the following 10 files in your project (ADDED SUGGESTIONS):

✓ Files to Update:

| FILE PATH                                                          | PURPOSE                                                            | PROGRESS |
|--------------------------------------------------------------------|--------------------------------------------------------------------|----------|
| resources/views/layouts/app.blade.php                              | Base layout with Tailwind dark mode support + dark toggle          | ✓ DONE   |
| resources/views/uma/index.blade.php                                | Uma List page (component-based layout)                             | ✓ DONE   |
| resources/views/uma/form.blade.php                                 | Enhanced UI for skill input with Alpine.js and dynamic behaviors   | ✓ DONE   |

- ``database/migrations/2025_07_14_052625_create_skills_table.php``

### ### Controllers

#### 5. \*\*Main Controllers

- ``app/Http/Controllers/UmaMusumeController.php`` (character management)
- ``app/Http/Controllers/CareerRunController.php`` (training runs)
- ``app/Http/Controllers/StatProgressController.php`` (stat tracking)
- ``app/Http/Controllers/SkillCareerRunController.php`` (skill system)

#### 6. \*\*Export Functionality

- ``app/Exports/CareerRunsExport.php``
- ``app/Exports/SkillCareerRunExport.php``
- ``app/Exports/StatProgressExport.php``

### ### Views & Components

#### 7. \*\*Blade Templates

- ``resources/views/uma/index.blade.php`` (character list)

- `resources/views/uma/form.blade.php` (character form)
- `resources/views/careers/show.blade.php` (run details)

## 8. **Custom Components**

- `resources/views/components/umamusume/skill-card.blade.php`
- `resources/views/components/umamusume/stamina-bar.blade.php`
- `resources/views/components/umamusume/responsive-grid.blade.php`

## 9. **Layouts**

- `resources/views/layouts/app.blade.php` (main layout)
- `resources/views/layouts/navigation.blade.php` (nav menu)

## ### **Frontend Assets**

### 10. **JavaScript**

- `resources/js/app.js` (main Alpine.js setup)
- `resources/js/undoStack.js` (form undo functionality)

### 11. **Styling**

- `resources/css/app.css` (Tailwind imports)
- All custom CSS in `resources/css/`

## ### **Testing & Seeding**

### 12. **Test Files**

- `tests/Feature/UmaMusumeTest.php` (example)
- `tests/Feature/CareerRunTest.php` (example)

### 13. **Seeders**

- `database/seeders/UmaMusumeSeeder.php`
- `database/seeders/SkillSeeder.php`

## ### **Additional Important Files**

### 14. **Service Providers**

- `app/Providers/AppServiceProvider.php`

### 15. **Helpers**

- `app/Helpers/UiHelpers.php` (view helpers)

### 16. **Console**

- `app/Console/Commands/` (any custom Artisan commands)

## ### **Files to Verify Last**

### 17. **Configuration**

- `composer.json` & `package.json` (dependencies)
- `phpunit.xml` (test config)

- `bootstrap/app.php` (application setup)

This checklist covers all critical files that should be reviewed before deployment, with the most important files for the core functionality listed first. The files are organized by functional area to make systematic review easier.

### PLAN 3 TURN BEFORE ARIMA KINEN RACE FOR Daiwa Scarlet

[start at 3 turn and ends as 1 turn, include Rest with the Training. training for one stat per turn including rest]

keep track of the Career progress. It's CRITICAL that Daiwa Scarlet MUST place 1st in this race.

which skills should Daiwa Scarlet pursue or skip for now?

list of available skills to update or progress:

Calm in a Crowd (136)  
Homestretch Haste (136)  
Outer Swell (144)  
Masterful Gambit (144)  
Gourmand (270)  
Hydrate (162)  
Late Surger Straightaways () (78)  
Late Surger Corners () (78)  
Pace Chaser Savvy () (88)

Current Skill Points (115)

Keep track of the progress of Daiwa Scarlet stats training development.

Name: [Peak Blue] Daiwa Scarlet

Career: Senior Year Late Dec (Arima Kinen Race)

Umamusume Class: Gold

#### [STATS]

SPEED: 549/1200 (C+)  
STAMINA: 349/1200 (D)  
POWER: 408/1200 (C)  
GUTS: 330/1200 (D)  
WIT: 292/1200 (E+)

#### [Skills]

Red Ace Lvl. 2  
Competitive Spirit (())  
Straightaway Acceleration  
Pace Strategy  
Preferred Position  
Up-Tempo

Frenzied Front Runners  
Unyielding Spirit

[Conditions] Fast Learner

[Mood] **Normal**

[Energy] **Less than 60%**

[Track] Turf(A) Dirt (G)

| <b>XSS Prevention</b>             | <code>renderHelpers.js</code>                                                                 | Escape all HTML output in dynamic rendering                    | Security        | High   |  |
| <b>Error Handling</b>             | <code>config.php</code>                                                                       | Use exception-based error mode and standardize error responses | Maintainability | Medium |  |
| <b>Recent Activity Icons</b>      | <code>get_recent_activity.php</code>                                                          | Map status dynamically to icons for maintainability            | UX              | Low    |  |
| <b>Caching Frequent Queries</b>   | <code>get_autosuggest.php</code>                                                              | Use APCu or file-based cache to reduce DB calls                | Performance     | Medium |  |
| <b>Debounce Input Fetching</b>    | <code>utils.js</code> ,<br><code>fetchAutosuggestions()</code>                                | Add debounce (500ms) to prevent API spam                       | Performance     | Medium |  |
| <b>Accessibility Enhancements</b> | <code>modal-plan.php</code> ,<br><code>stats-panel.php</code> ,<br><code>plan-list.php</code> | Add ARIA roles, labels, and tooltips                           | Accessibility   | High   |  |

|                                  |                                                                 |                                                                                                              |                |        |  |
|----------------------------------|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|----------------|--------|--|
| <b>Mobile Responsive</b>         | <code>plan-details.php,</code><br><code>filter-panel.php</code> | Wrap tables in <code>.table-responsive</code> , use responsive grid layout                                   | UI Polish      | Medium |  |
| <b>Print Formatting</b>          | <code>print.css</code>                                          | Improve table/badge visibility, remove hidden content during print                                           | Print Clarity  | High   |  |
| <b>Indexing High-Use Columns</b> | <code>uma_musume_planner.sql</code>                             | Add indexes for <code>status</code> , <code>goal.result</code> , <code>tag</code> , <code>turn_number</code> | Performance    | Medium |  |
| <b>Feedback on Plan Creation</b> | <code>script.js,</code><br><code>create-panel.php</code>        | Add toast notification or alert for success                                                                  | UX             | Low    |  |
| <b>Activity Skeleton Loaders</b> | <code>recent-activity.php</code>                                | Add skeleton loaders during async load                                                                       | UI Enhancement | Low    |  |
| <b>Energy Slider Polish</b>      | <code>style.css</code>                                          | Add transition effects for visual feedback                                                                   | UI Polish      | Low    |  |
| <b>Plan Preview on Import</b>    | <code>modal-import.php,</code><br><code>script.js</code>        | Add JSON preview before importing plan                                                                       | UX             | Low    |  |

|                                     |                                     |                                                                                     |                 |        |  |
|-------------------------------------|-------------------------------------|-------------------------------------------------------------------------------------|-----------------|--------|--|
| <b>Database Schema Enhancements</b> | <code>uma_musume_planner.sql</code> | Add <code>source</code> , <code>updated_at</code> , normalize booleans, ENUMs       | Schema Design   | High   |  |
| <b>Routing Prep for Deployment</b>  | <code>.htaccess</code>              | Add fallback routing for SPA-like navigation                                        | Deployment      | Medium |  |
| <b>Component Semantics</b>          | <code>stats-panel.php</code>        | Replace <code>.card</code> with semantic elements like <code>&lt;section&gt;</code> | Semantics       | Low    |  |
| <b>Centralize DB Connection</b>     | All PHP controllers                 | Extract DB connection to a single shared <code>db.php</code>                        | Maintainability | Medium |  |

## Should Double-Check

These files likely **don't need changes**, but **you should verify**:

### ✓ Components (UI/UX wrappers)

| File                                     | Why to Check                                                                                                                       |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <code>components/create-panel.php</code> | ⚠ You requested enhancements; ensure it's consistent with modal structure ( <code>modal.js</code> ) and <code>save_plan.php</code> |
| <code>components/filter-panel.php</code> | Ensure its form names match keys expected by <code>get_plans.php</code>                                                            |
| <code>components/footer.php</code>       | Only if you plan to insert JS or toast elements here                                                                               |

|                                          |                                                                              |
|------------------------------------------|------------------------------------------------------------------------------|
| <code>components/header.php</code>       | Ensure correct Bootstrap/assets inclusion                                    |
| <code>components/navbar.php</code>       | Ensure navigation links point to sections like planner, stats, etc.          |
| <code>components/modal-import.php</code> | Ensure JSON import behavior aligns with <code>script.js</code> preview logic |
| <code>components/stats-panel.php</code>  | Ensure it works if <code>loadStats()</code> is used (was stubbed)            |

## ✓ CSS

| File                       | Why to Check                                                                                                                   |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <code>css/style.css</code> | Optional: Verify <code>badge</code> , <code>table</code> , and <code>.skeleton-loader</code> styles are defined and responsive |

## ✓ PHP Backends to Validate Data Contracts

| File                              | Reason                                                                                                   |
|-----------------------------------|----------------------------------------------------------------------------------------------------------|
| <code>get_autosuggest.php</code>  | Ensure correct output for <code>fetchAutosuggestions()</code> — array of <code>{value}</code> or strings |
| <code>get_stats.php</code>        | ⚠ Only used if <code>loadStats()</code> is wired — not confirmed yet                                     |
| <code>get_plan_details.php</code> | If used instead of <code>get_plans.php?id=...</code> , confirm the shape                                 |
| <code>import_plan.php</code>      | Should parse JSON and call the same saving logic as <code>save_plan.php</code>                           |
| <code>delete_plan.php</code>      | Check it handles deletions and returns <code>{ success: true }</code>                                    |
| <code>export_plan.php</code>      | Ensure headers and data are correctly encoded for download                                               |

| File                        | Required? | Reason                                              |
|-----------------------------|-----------|-----------------------------------------------------|
| uma_musume_planner.sql      | ✓         | Add <code>skill_reference</code> schema and inserts |
| get_plan_details.php        | ✓         | Add reference join/display                          |
| save_plan.php               | ✓         | Skill saving logic                                  |
| import_plan.php             | ✓         | Parse skills against reference                      |
| components/plan-details.php | ✓         | Show enriched skill data                            |
| components/modal-plan.php   | ✓         | Skill tag selection / UI support                    |
| js/constants.js             | ✓         | Tag keys/symbols                                    |
| js/renderHelpers.js         | ✓         | Visual rendering of skills                          |
| js/formEvents.js            | ✓         | Skill input handling                                |

## ✓ Still Need to Update

### ♦ Server/API Logic

These files must reflect new schema for complete backend integration:

- `save_plan.php` → Save new `skills`, grades, turns, predictions, etc.
- `get_plan_details.php` → Must fetch new child tables: `skills`, `turns`, `race_predictions`, etc.
- `get_plans.php` → Update filters if you added any new ones (e.g., skill tags).
- `get_autosuggest.php` → Add autosuggestions for skill names/tags if needed.

### ♦ User Interface (UI logic and layout)

These affect rendering and input of new skill/grade data:

- `components/create-panel.php` → Only if it has form parts for adding plans (like inline creation).
- `components/filter-panel.php` → Add skill name/tag filters if needed.
- `components/stats-panel.php` → If you want summary stats like most used skills/tags.

#### ♦ JavaScript logic

- `js/script.js` → Likely the main driver; needs support for parsing/rendering extended skill data.
- `js/modal.js` → Populate modal with skill/turn data.
- `js/utils.js` → If it includes helpers for deep cloning, sanitizing form data, etc.

#### ♦ Styling

- `css/style.css` → Add badge color classes (`.bg-teal`, `.bg-orange`) if used for skill tags/grades.

---

### \* Optional but Good to Update

For documentation and future maintenance:

- `README.md` → Describe the updated schema/features.
- `ARCHITECTURE_SPEC.md` → Update DB schema references, new fields/tables.
- `DIRECTORY.md` → List newly used components if any.

## Still To Confirm or Update (depending on app behavior)

### ✖ Frontend UI Components (optional but useful):

| File                                     | Why It Might Need Update                                                                 |
|------------------------------------------|------------------------------------------------------------------------------------------|
| <code>components/create-panel.php</code> | If it shows a "quick add" plan form, should include new fields like skills, turns.       |
| <code>components/plan-details.php</code> | If it renders plan view inline, ensure it reflects all new data: skill tags, turns, etc. |
| <code>components/plan-list.php</code>    | Ensure new columns (status, tags) are added if used.                                     |
| <code>components/modal-plan.php</code>   | Must include fields/inputs for new schema — attributes, skills, grades, turns, etc.      |
| <code>components/modal-import.php</code> | Optionally show sample JSON fields now including extended schema (skills, tags).         |

### ⚙ Backend PHP (server routes)

| File                                                        | Why It Might Need Update                                                                  |
|-------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <code>save_plan.php</code>                                  | ✔ Must handle saving all nested data: skills, tags, turns, grades, race predictions, etc. |
| <code>get_autosuggest.php</code>                            | Add new support for skill_name or tag suggestions if required in UI.                      |
| <code>get_recent_activity.php</code>                        | Add logging for new events like turn updates or skill edits.                              |
| <code>get_stats.php</code>                                  | Add counts of unique skill tags, avg SP used, mood stats, etc.                            |
| <code>import_plan.php</code> / <code>export_plan.php</code> | Should fully serialize/deserialize all fields (especially arrays like skills).            |
